monocto is an upright italic, clearly evidenced by the lower-case letters a,e,f,g,i,k,l,u,w, x,y and several capitals. On on e hand, the design is inspired by a Renaissance running hand w ritten with a pen angle of 45°, and on the other, by rational,u tilitarian monospace types, sim ilar to those designed for the mechanical typewriter during th e Industrial Revolution.

As the writing tool touches the paper, a mark which can be redu ced to a double-square with bro ken corners is created, which t hen, according to ductus, trans forms itself into letter compon ents that are either thick 90°u erticals or thin 45°diagonals. The systematic geometry of Mono cto offers unexpected design po ssibilites. 1afonts.com
